問題 1,(4)  $f_{4}(x) = \chi(\pi^{2} - \chi^{2})$   $f_{4}(x) (x + x) (x + x)$   $A_{n} = \frac{1}{\pi} \int_{-\pi}^{\pi} \chi(\pi^{2} - \chi^{2})$   $zz = \frac{1}{\pi} \int_{-\pi}^{\pi} \chi(\pi^{2} - \chi^{2}) s$  $z = \frac{1}{\pi} \int_{-\pi}^{\pi} \chi(\pi^{2} - \chi^{2}) s$ 

fa(x)~12\sum\_{n=1}^{\infty}\frac{(-1)^{n-1}}{n^3}sinnx

 $a_n = \frac{1}{\pi} \int_{-\pi}^{\pi} \chi(\pi^2 - \chi^2) \cos n\chi \, d\chi \quad (n = 0, 1, 2, 3, \dots)$ 

ここで $g(\alpha)$ = $Anとおくと、<math>g(-\alpha)=-元 \int_{-\pi}^{\pi} \chi(\pi^2-\chi^2) cosnad\alpha = -g(\alpha)$ であるから、An(3)のである。

 $bn = \frac{1}{\pi} \int_{-\pi}^{\pi} \chi(\pi^2 - \chi^2) \sin n\chi \, d\chi \, (n = 1, 2.3.4, \dots)$ 

ここで $\beta(x) = bn \xi h(\xi)$ 、 $\beta(-x) = 元 \int_{-\pi}^{\pi} \chi(\pi - \chi^2) sinnxdx = g(x)$ て、あるから、 $bn \xi よ 偶 数であり、$ 

 $bn = \frac{2}{\pi} \int_{0}^{\pi} \chi(\chi^{2} - \chi^{2}) \sin n\chi d\chi \quad \text{e.r. $\pm 3$}.$ 

 $bn = \frac{2}{\pi} (\pi^2 \int_0^{\pi} x \sin nx \, dx - \int_0^{\pi} x^3 \sin nx \, dx)$ 

 $\int_{0}^{\pi} x \sin nx \, dx = \int_{0}^{\pi} x \left(-\frac{1}{n} \cos nx\right) dx = -\frac{1}{n} \left[x \cos nx\right]_{0}^{\pi} + \prod_{n=1}^{\infty} \cos nx \, dx$   $= -\frac{1}{n} \left(\pi \cos nx\right) + \frac{1}{n} \left[\frac{1}{n} \sin nx\right]_{0}^{\pi}$   $= -\frac{\pi \cos n\pi}{n}$ 

また

 $\int_{0}^{R} \chi^{3} \sin n \chi dx = \left[\chi^{3}(-\frac{1}{n}\cos n \chi)\right]_{0}^{\pi} - \left[3\chi^{2}(-\frac{1}{n^{2}}\sin n \chi)\right]_{0}^{\pi}$   $+ \left[\delta\chi(\frac{1}{n^{3}}\cos n \chi)\right]_{0}^{\pi} - \left[\delta(\frac{1}{n^{4}}\sin n \chi)\right]_{0}^{\pi}$   $= -\frac{1}{n}\left[\chi^{3}\cos n \chi\right]_{0}^{\pi} + \frac{3}{n^{3}}\left[\chi^{2}\sin n \chi\right]_{0}^{\pi}$   $+ \frac{6}{n^{3}}\left[\chi\cos n \chi\right]_{0}^{\pi} - \frac{6}{n^{4}}\left[\sin n \chi\right]_{0}^{\pi}$   $= -\frac{1}{n}\left(\pi^{3}\cos n \chi\right) + \frac{6}{n^{3}}\left(\pi\cos n \chi\right)$   $= \frac{\pi}{n}\left(\cos n \chi\left(\frac{6}{n^{2}} - \pi^{2}\right)\right)$ 

 $b_n = \frac{2}{\pi} \left( -\frac{\pi^3 \cos n\pi}{n} + \frac{\pi^3 \cos n\pi}{n} - \frac{6\pi \cos n\pi}{n^3} \right)$ 

整理して、  $b_n = -\frac{12\cos n\pi}{n^3}$   $J, 7, \alpha_n = 0 \ (n = 0, 1, 2, ...) \ , b_n = -\frac{12\cos n\pi}{n^3}$   $f_4(x) \sim 12 \frac{e}{n^2} - \frac{\cos n\pi}{n^3} \sin nx dx$   $= 7 \cdot -\cos n\pi = (-1)^{n-1} E = 3 + 3 + 5$   $f_4(x) \sim 12 \frac{e}{n^2} - \frac{(-1)^{n-1}}{n^3} \sin nx dx$ これは与式と一致する。
